Acoustic Ceiling Hangers
Type ACH

Designed specifically for applications where audible noise attenuation is of most concern, the ACH offers a low cost alternative to larger more traditional spring and rubber hangers.

Primarily used to effectively decouple mass acoustic ceilings from the supporting building structure - thus preventing noise breakout or break-in.

The ACH may also be used to reduce noise transmission from air conditioning equipment suspended in the ceiling void.

**DESIGN FEATURES**
- High resilience first grade natural rubber elements with deflections up to 3.5 mm.
- Available in two sizes for loads from 5 kg to 100 kg.
- Typical force isolation at maximum load of 40 dB to 46 dB @ 125 Hz.
- Integral failsafe steel overload washers.
- All steel components are zinc plated.
- Capable of 15° angular misalignment.
- Can be fitted into a wire tie, drop rod or a strut type support to an acoustic ceiling.

**TYPICAL APPLICATIONS**
- Acoustic Ceilings.
- Pipework.
- Axial Fans and Fan Coil Units.
- Ductwork and Attenuators.
- Air Conditioning Equipment.
