

Inertia Pouring Frames

Type IPF

Standard Design IPF Shown with 50mm deflection springs

Inertia Pouring Frames have been developed for use with machines which produce high levels of vibration or those which are subjected to external forces or are simply unstable when mounted directly on spring or rubber mountings.

The use of Type IPF concrete filled steel frames allows high deflection/low stiffness mounting systems to be used giving extremely high vibration isolation without excessive motion. If required Silicon Filled Dampers (Type SFD) can be incorporated in the system to further control motion during transient conditions such as machine start up, run down and machine faults.

Design Features

- Fully welded steel construction with integral concrete reinforcement fixed at 40 mm above bottom of frame.
- Standard recessed height reducing corner brackets to suit Type OS Open Spring and ECS Enclosed Spring mountings or cantilever design for larger mountings.
- Frames can be manufactured for 25 mm and 50 mm deflection mountings and 3 to 4 mm deflection Studflex rubber pads.
- Large range of standard sizes in three depths 150, 200 and 300 mm and frame lengths not greater than 12 x depth unless additional mountings are fitted.
- Any size designed to order with larger units supplied in bolt together “on site” sectional form.
- Finished with a single coat of anti corrosive primer on external surfaces only or special finishes to order.

Typical Applications

- Compressors.
- Generating Sets.
- Engine/Dynamometer Test Rigs.
- Refrigeration Plant.
- Pumps (particularly Belt Driven types).

STANDARD DESIGN

INTERMEDIATE BRACKETS FOR LONGER BASES

CANTILEVER BRACKET DESIGN FOR LARGER MOUNTINGS

SECTIONAL DESIGN FOR LONGER BASES

NOTE!

For frame sizes coloured grey additional mountings should be used or a deeper frame selected.

Frame weights include concrete at 2245 kg/m³ and mounting selections are based on 4 mountings per frame allowing 50% additional weight for the equipment to be supported. Nominal 25 mm deflection Type OS Open Spring Isolators have been listed, however the exact deflection will vary depending on the applied load.

When ordering, frames should be specified as Length x Width x Thickness, e.g. IPF.1200.0900.150 - IPF 1200 mm long x 900 mm wide x 150 mm deep. Mountings should also be listed e.g. "4 off OS25/160 - WHITE.
